

Meeting notes of 11-3-2019

Try and spread out the work over the week

Start looking into CI

- gitlab documentation, default or own

Merge features one at a time instead of all

Sprint review

Denys: GUI pages, did a lot previous week so there wasn't that much to do

Paul: tests, some issues with HTTPS(maybe not priority), rest API

Nathan: authentication some issues, has learned something about AWT

Justin: database queries, logincheck with database, feels a bit behind but will work on it

Marvin: database queries, helped Justin with logincheck, had some issues with intellij but solved it

Rohan: entity classes, repositories, controllers for database, problems with connecting to database with JPA, research user authentication with spring security(easier?)

A bit behind on schedule for the demo next week.

Spread the issues more efficiently

Changes for demo 2 should be seen in the GUI

Veggie meal can have a standard number for now.

Have someone be responsible for checking what issues are done by who.
