Meeting notes

Issues this week:
- Too late on getting everything setup.
- The new version of the application is still not runnable before the meeting.
- Communication went not that well last week as we could have finished the test by using Mockito a lot earlier before the meeting this week.

Solutions for the issues:
- Setting up deadlines for the tasks that needs to be done for the meeting on Sunday, instead of doing those last minute.
- Always test whether the application works before merging it into the master.
- Communicate more in the group chat for instance tell everyone whenever any task is done.

Things that are discussed:
- We need to assign two people to be presenting in the presentation.
- Decide whether we do a mock presentation to Louis for the next meeting.
- The amount of contributions should be split evenly among everyone. So, for instance, Paul should help others this week instead of coding.

Demo:
- We got 0.6 out of 0.8.
- We should have got the friend list working as well, but there was a minor bug which caused the reduction of the grade.
